Statistics 5193

*Note: this document was created using R Markdown.

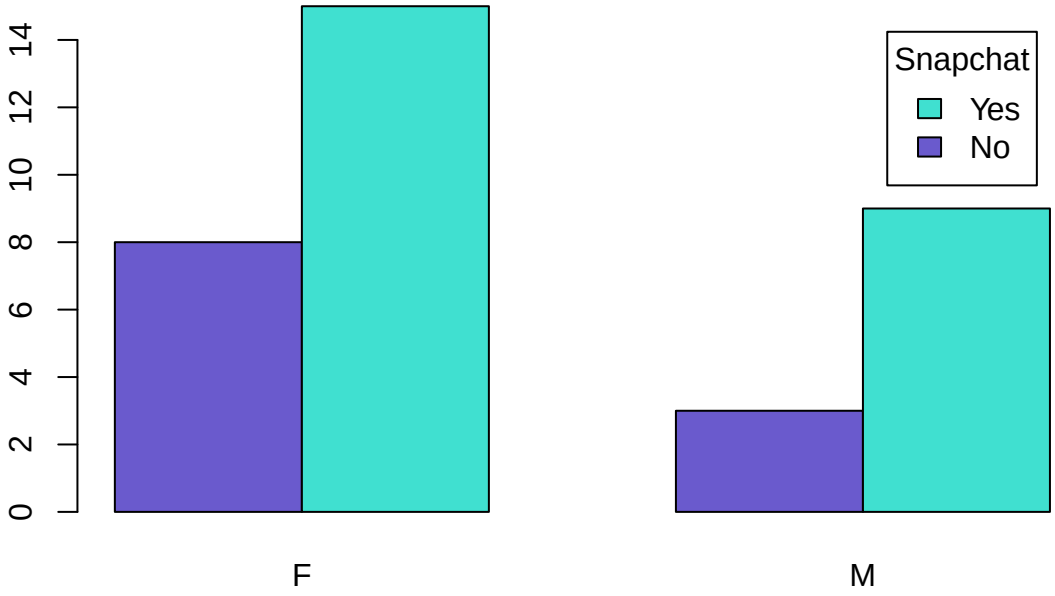
Question 1

```
library(readxl)
StudentData <- read_excel("~/Documents/data_science/r_stat_5193/data/StudentData.xlsx")

gender_snap <- table(StudentData$Snapchat, StudentData$Gender)

barplot(gender_snap, beside = T, col = c("slateblue", "turquoise"))

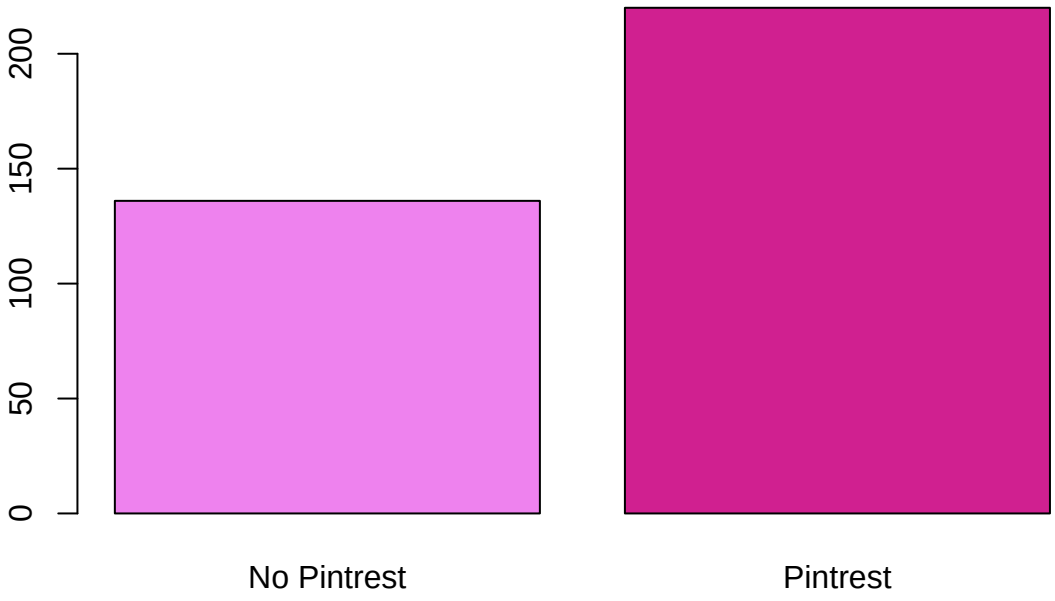
legend("topright",
       inset = 0.05,
       title = 'Snapchat',
       c("Yes","No"),
       fill=c("turquoise", "slateblue"))
```



Question 2

```
median_pin <-aggregate(StudentData$HSClass~StudentData$Pinterest, FUN = median)

barplot(median_pin$`StudentData$HSClass`,
        col = c("violet", "violetred"),
        names.arg=c("No Pintrest", "Pintrest"))
```

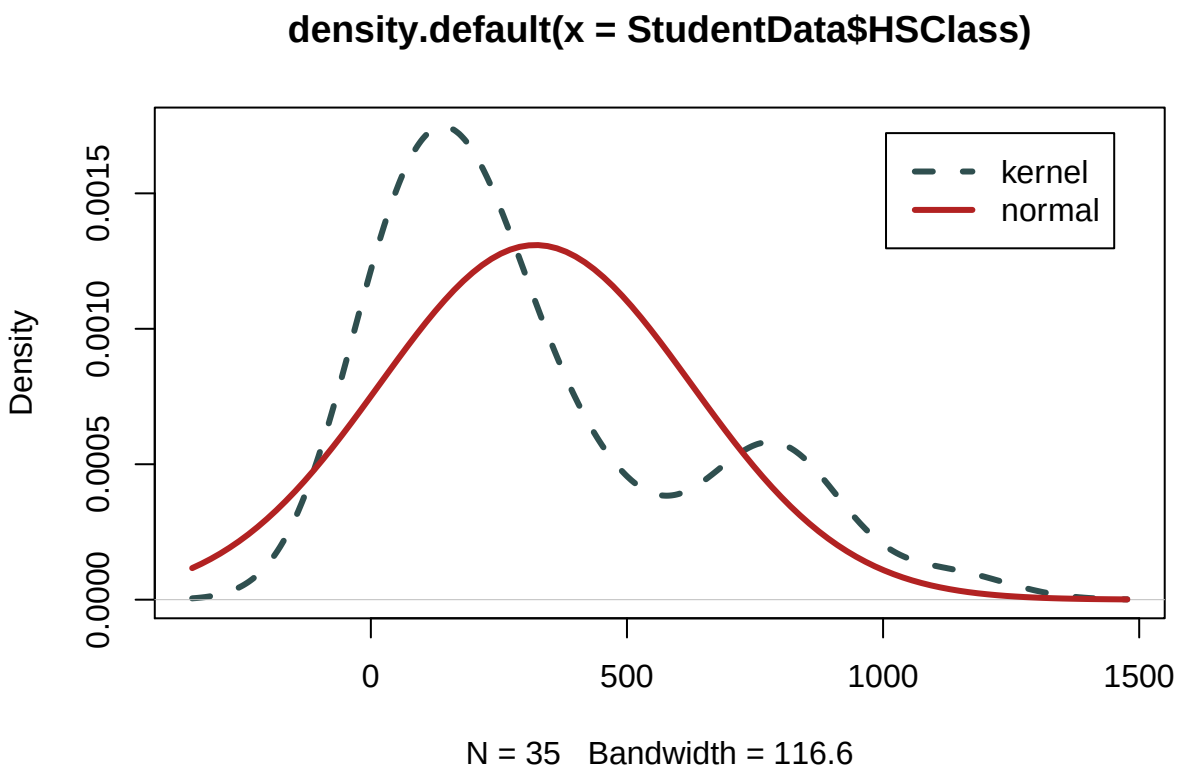


Question 3

```
plot(density(StudentData$HSClass),
     lty = 2,
     lwd = 3,
     col = "darkslategray")

curve(dnorm(x,
            mean(StudentData$HSClass),
            sd(StudentData$HSClass)),
      add = T,
      lwd = 3,
      col='firebrick')

legend('topright',
       inset = 0.05,
       legend = c('kernel', 'normal'),
       lty = c(2,1),
       lwd = c(3,3),
       col = c('darkslategray', 'firebrick'))
```



Question 4

```
us_dataframe <- as.data.frame(USPersonalExpenditure)
percents <- us_dataframe[,5]/sum(us_dataframe[,5])*100
pie_labels <- paste(row.names(USPersonalExpenditure), " ", percents, "%", sep="")

pie(USPersonalExpenditure[,5], labels = pie_labels)
```
